

## SYMBOLS

Symbol	Meaning	Chapter
$a, b$	individual economic agents	4–6
$\alpha$	production coefficient of the Cobb-Douglas production function	4, 6
$\beta$	scaling factor of the production function	5, 6
$C$	consumption	4
$c$	additional cost of renewable energy	6
$\mathcal{D}$	distribution over parameter values	2, 3
$d$	dynamics that change the production function	5
$\delta$	rate of depreciation for capital and technology	4–6
$E$	energy investment sector	6
$\mathcal{E}$	net effect of a strategy on growth;	5
$\varepsilon$	revenue tax on income to fund climate policy	6
	fund financed by the environmental tax	6
$F$	capital accumulation in the fossil energy sector	4, 6
$\mathcal{F}$	fitness of a strategy/agent	6
$f$	$P$ [agent mutates its strategy]	4
$\phi$	breakdown fraction of greenhouse gases	6
$G$	level of atmospheric greenhouse gases	6
$g$	$P$ [agent imitates]	4
$\gamma$	income growth rate of an agent	5, 6
$h$	Shannon entropy of a distribution;	2, 3
	threshold rank of imitated peers	4
$i$	index of a capital sector	4–6
$K$	capital accumulated in an investment sector	4–6
$k$	number of parameters;	2
	number of peers of an agent in the social network	4–6
$L$	technology	4
$m$	number of parameter vectors that form the REVAC table;	2
	number of renewable energy sectors	4
$N$	neighbors of an agent in the social network	4–6
$n$	number of parameter values that define a distribution;	2
	number of capital sectors	4, 5
$P$	population of economic agents	4–6
$p$	price of investment;	5
	probability that an agent is reached by advertisement	6
$\pi$	production coefficient of the Cobb-Douglas production function	5

$Q$	income without global warming	6
$q$	number of agents that receive a prize or are advertised	6
$R$	capital accumulation in the renewable energy sector	4, 6
$r$	rank of a strategy in a group of peers	4
$\rho_f$	threshold rank for mutation	4
$\rho_g$	threshold rank for imitation	4
$s$	investment strategy of an agent	4–6
$\sigma$	variance of the mutation operator or diversity control parameter	4–6
$t$	unit of time (usually financial quarter) in the discrete time model	4–6
$\tau$	regulatory tax on investments in fossil energy	6
$\nu$	sensitivity of economic growth to $G$	6
$W$	welfare of a population	4
$w$	amount of smoothing applied to a distribution; imitation weight	2 4
$\vec{x}$	vector of parameter values	2
$Y$	income of an agent	4–6
$z$	learning rate	4
$\zeta$	factor that combines several monotonic transformations of the production function	6
